

Can this page go live?

We checked fourteen pages against a saved sample report. Nothing here calls Peec. Peec is the source that knows whether an address was named. The page cannot know that by itself, so the check waits for Peec's report before a page can go live. Eight pages are stored in the database. Six examples exist only in this demo.

A page can go live when its address is in the report, the page has text, and a hidden label repeats that same address. How often the page was named can be low, even zero. A missing score holds it back.

Can this page go live?

We checked 14 pages against a saved sample report. 8 of them are stored in the database. The rest are examples we only use in this demo.

6

can go live

8

held back

The pages

Page	Language	Address	Saved where	How often named
cnt_file_taxes_berlin	de	https://example.com/de/steuern-berlin	In the database	0.5
cnt_file_taxes_berlin	en	https://example.com/en/taxes-berlin	In the database	—
cnt_elster_deadline	de	https://example.com/de/elster-frist	In the database	0.75
cnt_elster_deadline	en	https://example.com/en/filing-deadline	In the database	—
cnt_home_office	de	https://example.com/de/homeoffice	In the database	0.05
cnt_home_office	en	https://example.com/en/home-office	In the database	0.0
cnt_church_tax	de	https://example.com/de/kirchensteuer	In the database	—
cnt_moving_costs	en	https://example.com/en/moving-costs	In the database	0.4
cnt_commute	de	https://example.com/de/pendlerpauschale	Demo only	1.0
cnt_special_expenses	en	https://example.com/en/special-expenses	Demo only	—
cnt_werbungskosten	de	https://example.com/de/werbungskosten	Demo only	—

cnt_file_taxes_berlin	de	https://example.com/de/steuern-berlin	Demo only	0.5
cnt_allowances	en	https://example.com/en/allowances	Demo only	—

What we decided

Language	Page	Decision	Why
de	/de/steuern-berlin	Can go live	The page and the report match, so it can go live.
en	/en/taxes-berlin	Held back	This address is not in the report, so it stays held.
de	/de/elster-frist	Can go live	The page and the report match, so it can go live.
en	/en/filing-deadline	Held back	The report lists the page, but not how often it was named, so it stays held.
de	/de/homeoffice	Can go live	The page and the report match, so it can go live.
en	/en/home-office	Can go live	The page and the report match, so it can go live.
de	/de/kirchensteuer	Held back	This address is not in the report, so it stays held.
en	/en/moving-costs	Can go live	The page and the report match, so it can go live.
de	/de/pendlerpauschale	Can go live	The page and the report match, so it can go live.
en	/en/special-expenses	Held back	This address is not in the report, so it stays held.
de	/de/werbungskosten	Held back	The page has no text, so it stays held.
de	/de/umzugskosten	Held back	The hidden label does not match the address, so it stays held.
de	/de/steuern-berlin	Held back	The report failed to load, so it stays held.
en	/en/allowances	Held back	The hidden label does not match the address, so it stays held.

What we learned

- If the address, the text, and the hidden label agree with the report, the page can go live. That is still true when it was named every time, rarely, or not at all.
- If the address is missing from the report, the page stays held. The same happens when the report lists the page but does not say how often it was named.
- Empty text, a hidden label that points somewhere else, and a missing label all hold the page back before the report is even used.
- If the report fails to load, the page stays held, even when that same address would otherwise go live.

That decision is saved on the eight pages in the database. The page itself now says whether it can go live. Run the check again with `python experiments.py`.
